Toad® Extension for Visual Studio
Extend Visual Studio to Oracle for Business Value

Does Your Development Investment Deliver Value?
More than ever before, it’s critical to get the most from your technology investments and ensure that IT and business are aligned to deliver value and move your organization forward.

But if you’ve invested in Visual Studio technology and develop on Oracle, you’re missing a key ingredient: integration. Without it, your developers’ ability to manage change is impeded and you lose critical visibility into the lifecycle of your development initiatives. This can result in poor quality applications, missed deadlines, lost productivity and, in turn, revenue. The risk of changes to the database impacting end-user applications (and satisfaction) is great. Your organization needs a sustainable, repeatable, integrated methodology to deliver high quality applications – and business value.

The Solution: Toad® Extension for Visual Studio
Building on over 10 years of support for developers with our Toad® solutions, Quest Software now offers a new way to integrate Oracle and Microsoft® Visual Studio® 2010 development. Toad® Extension for Visual Studio extends the full benefits of Visual Studio to the Oracle platform, enabling your development team to collaborate through all stages of development and deliver high-quality applications through Microsoft’s application lifecycle management methodology.

Achieving your Development Goals with Quest Software and Microsoft
Visual Studio is the market leading development solution to ensure only the highest quality applications are developed. It helps the business and IT work together through integrated application lifecycle management.

Until recently, Visual Studio’s database features were only available for the SQL Server platform; Toad Extension for Visual Studio brings these features to the Oracle platform. Only Toad Extension for Visual Studio enables your development teams to:

- Simplify the process of Oracle development within Visual Studio 2010
- Synchronize database changes with application code within Team Foundation Server
- Collaborate with the development team across all stages of a project
- Deliver business value with Microsoft’s application lifecycle management methodology

With Toad Extension for Visual Studio and Visual Studio 2010, your developers will have the support and solutions they need to consistently deliver high quality applications and business value.
